

**Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claim 1 (currently amended):       A folder comprising:  
a collect cylinder having at least one gripper for receiving signatures, and at least one first tucker; and  
a jaw cylinder having at least one first jaw for interacting with the first tucker, the at least one first jaw including a stationary jaw part and a movable jaw part, the stationary jaw part and the movable jaw part being settable independently with respect to the first tucker;  
wherein the stationary jaw part is movable during a first setting operation with respect to the first tucker so as to define a first distance, and the movable jaw part is settable independently of the first setting operation so as to define a second distance between the movable jaw part and the first tucker during a tuck.

Claim 2 (canceled).

Claim 3 (original):   The folder as recited in claim 1 wherein the jaw cylinder further comprises a jaw spider, the stationary and movable jaw parts being commonly supported on the jaw spider.

Claim 4 (canceled).

Claim 5 (original):   The folder as recited in claim 1 further comprising an adjusting center or gear for moving the tucker with respect to the stationary jaw parts.

Claim 6 (original):   The folder as recited in claim 5 further comprising a cam rotatable for setting the movable jaw part with respect to the first tucker.

Claim 7 (original): The folder as recited in claim 1 further comprising a cam rotatable for setting the movable jaw part with respect to the first tucker.

Claim 8 (previously presented): A method for adjusting a printing press comprising the steps of:

adjusting a stationary jaw part of a first jaw with respect to a first tucker of a collect cylinder; and

independently adjusting the distance between a movable jaw part and the first tucker for a tucking operation;

wherein the adjusting of the stationary jaw part step also causes the movable jaw part to move with respect to the first tucker.

Claim 9 (canceled).

Claim 10 (canceled).

Claim 11 (previously presented): The method as recited in claim 8 further comprising adjusting a second fixed jaw part of a second jaw with respect to a second tucker of a delta/double parallel cylinder.

Claim 12 (canceled).

Claim 13 (canceled).

Claim 14 (previously presented): A method for adjusting a printing press comprising the steps of:  
adjusting a stationary jaw part of a first jaw with respect to a first tucker of a collect cylinder;

independently adjusting the distance between a movable jaw part and the first tucker for a tucking operation; and

adjusting a second fixed jaw part of a second jaw with respect to a second tucker of a delta/double parallel cylinder.
